

SkillGraph

AI-Powered Career Growth Platform

Product Owner: Rifa Safeer Shah

Background

Why are we here?

- Professionals are learning more than ever - but lack direction
- Career growth tools are fragmented across platforms
- LinkedIn profiles show experience, not skill readiness
- Recruiters struggle to assess real candidate potential

Know your skills. Close your gaps. Get hired faster.

Business Case

Initial Focus

Where are we starting?

- Professionals are investing heavily in learning but lack clear career direction
- LinkedIn has 1B+ users, yet no system measures true skill readiness
- Certifications and courses don't translate into measurable outcomes
- Root cause: No standardized way to map skills → roles → career progress

Opportunity

What's the problem?

- Completed certifications are posted on LinkedIn, but provide no long-term value
- No standardized system to measure or track skill development
- Skills are not mapped to relevant roles, limiting career visibility
- Recruiters rely on resumes instead of true skills readiness
- LinkedIn has 1.2B+ users with 100M+ job postings monthly
- 27M+ users on LinkedIn Learning, yet 76% feel unprepared for jobs

Market Opportunity

Total Addressable Market (TAM)

- Global professional workforce: ~3.5B people
- Target segment (knowledge workers / upskilling users): ~1B users
- Assume \$10/month subscription (~120/year)

TAM Calculation: 1B users x \$120/year = \$120B

Proposal

What's our solution?

- A system that converts certifications and learning into quantifiable Skill Scores
- Builds a dynamic Skill Profile based on user activity and learning
- Maps skills to relevant roles to generate Role Fit Scores (%)
- Recommends targeted courses and actions to close skill gaps
- Enables recruiters to assess candidates based on skill readiness, not just resumes

Return On Investment

What can we do?

Cost Estimate (12 months)

- 6 engineers x \$10K/month x 12 months
- ~\$720K total development cost

Revenue Potential (12 months)

- \$10/month subscription x 1M users
- ~\$120M/year revenue

ROI on Conservative Scenario (12 months)

- \$10/month x 10K users = \$100K/month
- \$1.2M/year
- $\text{ROI} = (1.2\text{M} - 0.72\text{M}) / 0.72\text{M}$
- ROI = 67%

Positive ROI within first year with strong upside potential

Measurement

How will we know if we're successful?

User Adoption

- Monthly Active Users (MAU)
- % generating Skill Scores
- Usage frequency

Product Effectiveness

- % improving Role Fit Score
- Course → skill conversion
- Engagement with recommendations

Business Impact

- Premium conversion rate
- Revenue per user
- Recruiter adoption

Year 1: 1M active users | 5-10% premium conversion

Competitors

LinkedIn Learning

- Course-based learning (content-focused)
- Course completion certificates are static signals
- Personalized course recommendations
- Large content library

SkillGraph

- Skills Score (quantifiable skill measurement)
- % Role Fit Score (job readiness indicator)
- Skill → role mapping (clear career alignment)
- Career path recommendations (actionable next steps)

Key Difference: Learning activity vs Measurable skill readiness

Competitive Landscape

Platform	Focus	Strengths	Gap
Coursera	Learning	Certifications, structured learning paths	No role mapping
Indeed	Jobs	Job marketplace, recruiter adoption	No skill intelligence
SkillGraph	Skills + Roles	Skill Score, Role Fit Score, career mapping	

Our Advantages

Why are we better?

End-to-End Solution • Learning → skills → roles in one platform	Role-Based Career Alignment • Skill → role mapping • Role Fit Score (%)
Measurable Skill Intelligence • Quantifiable Skill Scores • Tracks dynamic skill progression over time	Flexible Career Paths • Easily pivot and explore new career direction with transferable skills • Adapts as user skill evolves
Data-Driven Hiring • Recruiters evaluate real-time skill readiness • Dynamic profiles reflect current capabilities, not past roles	

Roadmap and Vision

Roadmap Pillars

Where do we go from here?

1. Skill Intelligence Engine

- Improve Skill Score accuracy
- Real-time skill tracking

2. Career Path Optimization

- Skill → role mapping
- Personalized career pathways

3. Hiring & Ecosystem Integration

- Recruiter tools
- Partnerships (learning + employers)

Vision: Become standard for skill readiness

Skill Intelligence Engine

Building measurable and dynamic skill tracking

- Skill Score System
 - Quantifies user skills based on certifications and active learning courses
- Dynamic Skill Progression
 - Continuously updates skill levels as users learn and gain experience
- Skill Validation Signals
 - Incorporates certifications, course completions, and activity into scoring

Career Path Optimization

Connecting skills to meaningful career outcomes

- Skills → Role Mapping
 - Matches user skills to relevant job roles
- Role Fit Score (%)
 - Quantifies how closely a user aligns with specific roles
- Personalized Career Paths
 - Recommends next steps to transition into target roles

Hiring & Ecosystem Integration

Enabling data-driven hiring and partnerships

- Recruiter Skill Dashboard
 - Allows employers to evaluate candidates based on skill readiness
- Skill-Based Candidate Matching
 - Matches candidates to roles using Skill Scores and Role Fit Scores
- Ecosystem Partnerships
 - Integrates with learning platforms (e.g., Udacity, etc.) and employers

Where Do We Go From Here?

Widening the scope

- Become the standard for skill-based hiring
 - Shift industry from resumes → measurable skill intelligence
- Expand into global career ecosystems
 - Integrate with universities, employers, and learning platforms
- AI-driven career coaching
 - Provide real-time, personalized guidance for career decisions
- Cross-industry skill benchmarking
 - Enable users to compare skills against industry standards

Thank you
